

# 5 Ways to Keep Kids Safer Online

- 1) Agree on Rules.** Set up clear, simple, easy-to-read rules for Internet use. Post them on or near the monitor:
  - What web sites are okay to visit?
  - When and how long should you be online?
  - Where can they use the computer?
- 2) Talk About It.** Keep an open line of communication between you and your child. Talking to your kids is key to helping them stay safe online.
  - Talk openly and honestly about what is and is not appropriate to do online.
  - Ask your kids to show you their online activities.
  - Discuss the risks without communicating fear.
- 3) Implement Safety Tools.** Use software to filter the content and to monitor who and what reaches your computer. To see the Internet Filter Review of the top ten software applications, go to: <http://internet-filter-review.toptenreviews.com>
- 4) Avoid Isolation.** Locate the computer in a central location where others can see the computer screen, never in a child's bedroom.
- 5) Guard Personal Information.** Explain to your kid's what is *personal information* and discuss when it is appropriate to share it.

"Keeping kids safe online isn't about technology; it's about parenting."

- Larry Magid & Anne Collier (2007)
